

Individual productivity at work

What's new in Dragon Professional Individual compared to Dragon Premium 13.

Dragon Professional Individual drives individual productivity at work by enabling fast, accurate dictation and transcription with the right level of customisation to speed document creation. Add custom words such as specific industry terminology, insert frequently used custom text or shortcut repetitive tasks by voice to work faster and smarter – whether you're creating documents, spreadsheets and presentations, sending emails, filling out forms or simply looking to reduce the physical stress of typing. For professional dictation on the go, share your desktop dictations and automatically sync custom words and auto-texts with your Dragon Anywhere enabled mobile device to be productive by voice in the office or on the road.

While Dragon Premium 13 offers many great features for a residential user, if you are looking to use Dragon for work, Dragon Professional Individual offers the right level of enhancements that helps boost your productivity potential.

Sync with separate Dragon Anywhere mobile app

With Dragon Professional Individual, you can sync your customisations with the separate, cloud based Dragon Anywhere app that provides

professional grade continuous dictation capabilities on your iOS or Android mobile device. This capability enables you to achieve seamless productivity – both in the office and on the road – for greater efficiency wherever your work takes you.

Advanced custom commands

- Ability to include variable fields in the body of auto-texts where the user can later type or dictate a specific value. This ability makes it easier to create a template, such as a form with entries, where the fields can be filled out quickly one by one.
- Include variables in command names, so you don't have to remember one specific wording
- Create or import powerful commands to automate tasks (Macro Recorder, Step-by-Step, and VBA-style Advanced Scripting), useful when for example opening a particular document, or formatting, then saving, and sending the current document
- Organise custom commands in custom groups

Advanced personal administration

Ability to export custom words to XML format to capture their properties, such as custom spacing and capitalisation.

To learn more about Dragon Professional Individual, as well as the complete line of Dragon speech recognition products, visit:
www.nuance.co.uk/dragon/

Client based advanced administration

- Ability to import/export custom commands in the Command Browser
- Ability to maintain, import and export multiple vocabularies (for optimal accuracy even on very different topics)
- Security features for custom commands, such as support for protected commands. When you export a set of custom commands into a file, you can set the permissions on that file so that a user can dictate the commands but cannot view source code, edit or re-export that command, hence protecting the original command
- User can obtain a recognition log file for rich, objective usage data

Transcription tools

- Ability to accurately transcribe another single speaker's voice from pre-recorded audio files or from podcasts without having to create and train a profile using a recording of that single speaker reading pre-selected text
- To transcribe an audio file, Dragon checks if your profile needs a transcription source created and will lead you through a training process. If your audio recording is of a different speaker, you must create a new profile. Only a 90 second audio clip of that speaker (instead of the speaker personally

present to read a passage) is required for training.

- .m4a format is now supported (in addition to .wav, .wma, .mp3, .dss and .ds2)
- Includes option to save synchronised audio from dictation done in certain apps. Dragon saves a .dra file along with the transcribed text file. By doing so, you (or someone else) can reopen the documents later to make corrections after the original dictation session

Auto-transcribe folder agent

- Monitors a specific directory to automatically launch transcription
- Provides a synchronised audio file along with the transcript, for deferred correction
- Supports .DOC, .RTF and .TXT output formats
- Run a script (such as an email notification) when a transcription is complete

Extend accessibility and prevent repetitive stress injuries

Dragon Professional Individual eliminates barriers for individual workers with disabilities that limit their ability to use a keyboard and mouse. In addition, it helps prevent fatigue and repetitive strain injuries by offering a comfortable, ergonomic alternative to the keyboard and mouse.

Easier to use

- Newly designed Dictation Box, so you can easily create or edit text by voice even in applications not supported by Dragon
- Additional help with in-context commands when user asks "What can I say?" at any time, giving you not only a hint on the spot but allowing you to learn these essential commands over time
 - A list of relevant commands will immediately assist you if you ask "What can I say?" when working in for example, Outlook, Word, WordPerfect, Excel, Web browsers (IE, Chrome, Firefox) and on the desktop
 - The "What can I say?" window offers additional help with the following:
 - Show navigation commands
 - Show correction commands
 - Show formatting commands
 - Show punctuation commands
 - Open Help
- Easier access and management of "Text-and-Graphics" commands (or "auto-texts") in the Tools menu
- Easier access and management of user defined commands in the Tools menu with "Manage Custom Commands" option

About Nuance Communications, Inc.

Nuance Communications is reinventing the relationship between people and technology. Through its voice and language offerings, the company is creating a more human conversation with the many devices, electronics, apps and services around us. Every day, millions of people and thousands of businesses experience Nuance through intelligent systems that can listen, understand, learn and adapt to your life and your work.
